

NO-COST HISTORICAL DNA REVIEW

RECOVER MORE VALUE FROM DNA EVIDENCE YOUR AGENCY ALREADY HAS

MONTGOMERY COUNTY, PA

1,200+
ITEMS AND SUSPECTS

SUCCESS IN MONTGOMERY, PA

A TrueAllele® historical DNA evidence review identified substantial case-to-case links and suspect-hit opportunities in Montgomery County, Pennsylvania.

DNA evidence reported as **inconclusive**, **uninformative**, **too complex**, or **otherwise not useful** can still contain recoverable information.

Cybergenetics reviews eligible historical DNA evidence data at **NO COST** to show where TrueAllele can recover additional usable DNA information.

What DNA evidence data is reviewable?

Cybergenetics offers a review of up to **TWO YEARS** of eligible historical DNA evidence data. The review is focused on DNA items previously reported as:

Inconclusive

Uninformative

Too complex

Low-level

Mixed

Insufficient

Also reviewable: data otherwise reported as not useful

What your agency receives

Cybergenetics provides a Historical DNA Review Summary that identifies whether additional DNA information was recovered from the reviewed evidence.

The summary can help your agency understand whether existing DNA evidence may support further case development.

No cost for the review. Low effort. No obligation.

Unresolved DNA evidence may still be worth reviewing.

The process is designed to be straightforward and low burden for your agency.

Cybergenetics will discuss the review scope with your team and identify the easiest way to evaluate eligible historical DNA evidence data.

For agencies with unresolved cases, this review can help determine whether existing DNA evidence can still produce investigative value.

Important Note

The No-Cost Historical DNA Review is not a final case report or court-ready DNA conclusion.

Formal TrueAllele reporting is required before review findings are used for investigative, charging, plea, or court purposes.

Contact Cybergenetics to discuss a no-cost review of your agency's historical inconclusive or uninformative DNA evidence.
