New and updated features in the VUIer™ 2022 release:

All

- Updated MCR Engine.
- Add support for PowerPlex® ESX 16, and PowerPlex® ESI 16.

Data

- Support for selecting multiple gels in Batch Request upload.

Request

- Export *.req* files from the Review window before upload.

Report

- New Distribution interface for constructing contributor and contributor distributions, conducting rapid and accurate validation studies, and reporting LR error rates in casework. Please refer to the "TrueAllele® VUIer™: Distribution" manual for details.
- A faster Likelihood Ratio calculation method (for positive theta), with a preference setting. Please refer to the "TrueAllele® VUIer™: Report Module" manual for details.
